

How to make cloud lamp

- light plastic bottle
- pillow fluff from an old pillow
- christmas/fairy lights
- transparent fishing line
- hot glue gun
- paper knife
- yarn needle

Materials and supplies

Step one. Remove the cup, handle and label. It's ok, that the place is still sticky.

Step two. Fill the bottle with the lights.

Crafting process

Step three. Glue the battery box on the bottle. Make sure that the lid of the batterie box is upside, so you could change the batteries.

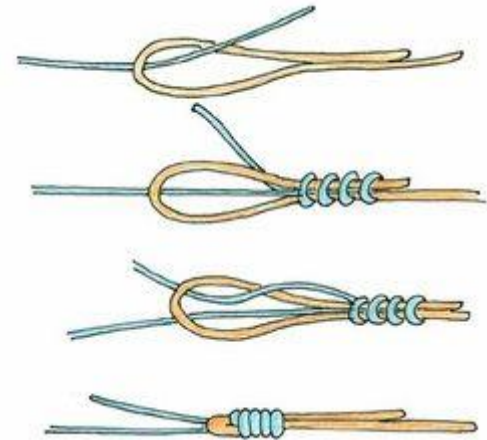

Step four. Fix wire with the glue.

Step five. Make tiny cuts on the marked places and pull the fishing line through them so you can hang the lamp.

Be careful with the knife!

Fishing line knot.

Measure how low you want the lamp to hang and tie a knot. To make it easier, use specific fishing line knot.

Before you glue on the fluff, make it fluffier by plucking it with your fingers.

Step six. Start gluing on the fluff next to the area with the fishing line. Later it will be easier not to glue on it. Continue gluing while the bottle is covered.

Be careful with the hot glue. Don't burn yourself!

Step seven. When the bottle is covered with the fluff, turn on the lights to see where you need to add more.

When you are satisfied with your work, you're done!

I'm glad with the result and I'm going to make some more cloud lamps!

It was quite simple and interesting project to do. You can also make some variations by adding colorful lights and making different forms from interesting bottles.

My thoughts
